## 病理部 病理組織檢查報告

MALIGNANCY

病歷號: 5096948

姓名: 柯翠蓮

出生日期: 1950/9/25

第 1/2 頁

外科病理號碼: S2329328 v. 2 身分證字號: B200561753 收件日期: 2023/07/17 00:00

檢體: b 科別: MED 13B-19-01(總院) 報告日期: 2023/07/18 15:37

性別: 女 年齡: 072/10

組織由來:

Pancreatic body-tail tumor

臨床診斷:

Adenocarcinoma

病理組織學診斷:

Pancreas, body to tail, endoscopic ultrasound fine needle biopsy, adenocarcinoma

MACROSCOPIC :

\*Quantity: Three tissue fragments, up to 0.2 x 0.2 x 0.2 cm in size; yellowish white and soft

All for section: A1

Jar 0

MICROSCOPIC :

- \* Histological diagnosis: Adenocarcinoma
- \* High grade dysplasia (including severe dysplasia and carcinoma in situ): Absent
- \* Invasive carcinoma: Present
- \* Surgical margin: Cannot be assessed
- \* Comment: Primary is more favored. Further immunostains are pending.

Ref: nil

## 入院診斷(Admission Diagnosis)

## [Main diagnosis]

#. Hypovascular lesion at pancreatic body to tail, suspected pancreatic adenocarcinoma, with suspected bone metastases and vascular invasion

## [Underlying disease]

- #. Hypertension
- #. Dyslipidemia
- #. Pre-diabetes mellitus, HbA1C 6.9%, under lifestyle modification
- #. Thyroid cancer, status post thyroidectomy, under Eltroxin
- #. Autosomal dominant polycystic kidney disease with polycystic liver disease

## 出院診斷(Discharge Diagnosis)

## [Main diagnosis]

- #. Pancreatic body adenocarcinoma, cT4N0M1, with celiac trunk encasement and bone metastases at T12 spine and left lower sacrum, status post port-A insertion on 2023/7/21
- #. Resolved B hepatitis

## [Underlying disease]

- #. Hypertension
- #. Dyslipidemia
- #. Pre-diabetes mellitus, HbA1C 6.9%, under lifestyle modification
- #. Thyroid cancer, status post thyroidectomy, under Eltroxin
- #. Autosomal dominant polycystic kidney disease with polycystic liver disease

## 轉出加護病房診斷(Diagnosis for ICU)

Nil

## 主訴(Chief Complaint)

Informant:the patient and the EMR

Intermittent dull abdominal pain over left upper quadrant for a month

## 病史(Patient History)

## [Present illness]

This is a 72-year-old woman with a medical history of

1. Hypertension
2. Dyslipidemia
3. Pre-diabetes mellitus, HbA1C 6.9%, under lifestyle modification
4. Thyroid cancer, status post thyroidectomy, under Eltroxin
5. Autosomal dominant polycystic kidney disease with polycystic liver disease

The patient is ADL/iADL totally independent and lived with her husband in Taichung city.

She reported intermittent dull epigastralgia over left upper quadrant for a month.

There was no nausea, vomiting, diarrhea, fever, night sweating, fatigue, or hot flushing

第2頁

noticed. Body weight loss of 5 kilograms in half year was noticed, but notably under regular weight bearing training and diet control. Arrupted onset of epigastralgia over left upper quadrant, scored 5 out of 10, developed on 2023/7/7 night before sleep. The pain persisted and could not relieve in any position. She could not even sleep without pankillers. She then sought help at emergency department at 中國 medical hospital on 2023/7/8. Abdominal+pelvis CT with and without contrast showed 1. Status of thyroid cancer post op. 2. A 2.8x2.5cm pancreatic cancer in pancreatic body is suspected, suggest clinical correlation. Peripancreatic invasion is suspected. Encasement of splenic artery and splenic vein. 3. An osteoblastic lesion over T12, metastasis is suspected. 4. Polycystic kidney disease and polycystic liver disease is suspected. 5. Fatty liver. 6. An uterine myoma.

7. Right pleural effusion with dependent lung atelectasis. Under the impression of suspect pancreas cancer, she was initally adviced to admit to 中國 medical hospital for proceeding survey as soon as possible. However, she sought second opinion at our hospital and was admitted on 2023/7/12 for further management.

## [Past history]

1. Hospitalization: nil
2. Surgery: thyroidectomy

## [Family history]

Family history with first-degree relatives (+)

- Father: HCC
- Mother: polycystic kidney disease
- Uncle(mother side): polycystic kidney disease
- Sister: polycystic kidney disease
- Brother: polycystic kidney disease

## [Allergic History]

1. Medication Allergy: denied reported by the patient on 2023/7/12
2. Allergy to Medical Device and Materials: denied reported by the patient on 2023/7/12

## [Current Medication]

1. from National Taiwan University Hospital: nil
2. from the others:
  - Levothyroxine Sodium (Eltroxin 100 mcg/tab) 1 tab TIW
  - Levothyroxine Sodium (Eltroxin 100 mcg/tab) 0.5 tab TIW
  - Acetaminophen (Acetal 500 mg/tab) Q6H PO
  - Bisoprolol 5 mg/tab 0.5 tab QN
  - Caudet 5/20 mg 1 tab QN
3. Chinese medicine or herbal medicine: denied
4. Dietary supplements: denied

## [Social and Personal history]

1. Substance abuse:
  - Tobacco: denied
  - Alcohol: denied
  - Betel nuts: denied
  - Prohibited drugs: denied
2. TOCC:

port-A placement

## 手術(Operation)

2023/7/21 port-A insertion

## 住院治療經過(Course and Treatment)

Upon admission, abdominal MRI+MRCP was performed on 2023/7/13 afternoon and showed pancreatic body cancer, 3.9cm, with T12 and celiac trunk invasion, tentative staging cT4N0M1. Abdominal echo on 2023/7/14 showed pancreatic tumor, body and tail, with celiac trunk encasement, polycystic liver and kidney disease, splenic lesion, r/o angiomyolipoma. We had consulted surgeon on 2023/7/14 and he suggested neoadjuvant chemotherapy first. CA-199 was 3086.47 U/mL, which may indicating pancreatic adenocarcinoma. Autoimmune profiles including IgG and IgG4 were within normal level. Hepatitis profile showed resolved B hepatitis and no HCV infection. Brain+chest CT on 2023/07/16 showed no metastases. EUS-FNB was conducted on 2023/7/17 and showed histological adenocarcinoma, favored pancreatic cancer (Immunostains: CK7 +, S-100P +, TTF-1 -). Bone scan on 2023/7/18 showed T12 spine and left lower sacrum metastases. Port-A insertion was done on 2023/7/21. We had consulted our Oncologist Dr. 楊士弘 and the patient decided returning to Taichung for further treatment after shared-decision-making.

## 住院用藥摘要:

Cefazolin Sodium, Gentamicin Sulfate, Bisoprolol Fumarate, Dextrose and Electrolyte Solution, Sodium Chloride, Acetaminophen, Tramadol HCl 37.5 mg, Acetaminophen 325 mg, Tramadol HCl, Fentanyl Citrate, Hyoscine Butylbromide, Sennoside A+B, Magnesium Oxide, Metoclopramide (as HCl salt), Levothyroxine Sodium, Acetylcysteine, (自備)Bisoprolol 5 mg/tab, (自備)Caudet 5/20 mg

急診腹部超音波檢查報告

醫令: 急診腹部超音波檢查報告 報告醫師: 影像時間: 2023/07/14 00:00  
腹部超音波檢查報告(急診部)病患姓名 : 柯翠蓮 病歷號碼 : 5096948 病床號碼 : 13B 1301  
年齡 : 73 性別 : F

檢查日期 : 20230714 檢查項目 : 19001CZR

## Chief Complaint :

P body and tail tumor with bone mets, for evaluation before FNB  
SONAR FINDINGS :

Liver :

Fine echotexture. Multiple anechoic lesions up to 57 mm in bilateral lobes of liver.  
Intra-hepatic duct :

No dilatation.

Common bile duct :

No dilatation.

Gall bladder :

Negative.

Portal vein system :

Patent.

Pancreas :

One 40.0 x 21.4 mm (at least) hypoechoic lesion at the body and extending toward the  
tail,

encasing the celiac trunk. No P duct dilatation.

Spleen :

Splenic index 33.7 x 40.2 mm. One 17.3 mm hyperechoic lesion without PAS within.  
Kidney :

Multiple anechoic lesions up to 40.9 mm at bilateral kidneys.

Ascites :

Nil

Diagnosis :

Pancreatic tumor, body and tail, with celiac trunk encasement.

Polycystic liver and kidney disease.

Splenic lesion, r/o angiomyolipoma.

Comment :

## 影像報告(Imaging Report)

2023/07/12 Chest : PA View (Standing) Bilateral apical pleural thickening with calcified plaques. Normal heart size. Tortuous aorta with wall calcification(s). Prominent hilar lung marking(s). Degenerative spondylopathy or spondylosis with marginal osteophyte or spur formation.

=====

2023/07/13 MRI With/Without Contrast--Abdomen MRI of the abdomen without/with contrast enhancement shows:

- > Numerous cysts in both lobes of the liver and bilateral kidneys, polycystic liver and kidney diseases are considered.
- > A 3.9cm lobulated tumor with hypoenhancement at pancreatic body with encasement of celiac trunk, malignancy is highly suspected.
- > No definite abnormality of gallbladder, spleen, bilateral adrenals.
- > No definite paraaortic lymphadenopathy.
- > No ascites.
- > An enhancing lesion at T12 vertebral body, susp. metastasis; recommend bone scan correlation.
- > Mild right pleural effusion. Subsegmental atelectasis at right lower lobe.

## Imaging Protocol

MRI of the abdomen without/with contrast enhancement

## 2. Tumor Location

 Pancreatic head and neck  Pancreatic body  Pancreatic tail Other:

## Tumor Size:

 Measurable: 3.9 cm in greatest dimension Non-measurable

## 3. Tumor Invasion or Encasement

 Tumor limited to the pancreas Yes: Celiac trunk  Superior mesenteric artery  Superior mesenteric vein  Common hepatic artery Adjacent organs: Other:

## 4. Regional Nodal Metastasis

 No or equivocal Yes, location:

## 5. Distant Metastasis (in this study)

 No or Equivocal: Yes, location: bone

## 6. Other findings: please see the above text for detail.

2023/07/16 CT With/Without Contrast-Chest Chest CT without and with IV contrast shows:

&gt; no definite lung abnormality. right pleural effusion.

&gt; no lymphadenopathy in mediastinum.

&gt; normal heart size.

&gt; bone metastasis at T12. the alignment of the bony structure is intact.

&gt; no evidence of solid lesion in visible spleen, pancreas, gallbladder, liver, bilateral kidneys and bilateral adrenal glands.

2023/07/16 CT With/Without Contrast-Brain History: Pancreatic body cancer, polycystic liver and kidney disease.

CT scan of the brain without/with contrast enhancement shows:

1. prominent sulci, fissures and ventricles.
2. there is no definite abnormal attenuation in brain parenchyma.
3. atherosclerotic change of intracranial arteries.
4. no definite abnormal enhancing lesion in brain parenchyma.
5. intact cranial vault.

2023/07/18 Whole body bone NUCLEAR MEDICINE STUDY: Whole body bone scintigraphy.

RADIOPHARMACEUTICAL: Intravenous 25 mCi Tc-99m MDP (methylene diphosphonate).

## SCINTIGRAPHIC FINDINGS:

Whole body scanning of the entire skeleton shows the followings:

\* Hot areas at T12 spine and left lower sacrum.
